Work Experience

2020 - 2021

Company: Digital House
Role: Advanced Teacher
Website: https://www.digitalhouse.com/
My contribution:
• Participating in the organization of this new career by creating topics and tests in Front End assignments :
https://www.digitalhouse.com/ar/beca/certifiedtechdeveloper

2019 - 2020

Company: Acamica
Role: Web Developer Full Stack Mentor / online
Website: https://www.acamica.com/
My contribution:
• Support and teach students twice a week in order to help them to become full

stack developers.

2019

Company: EducacionIT
Role: IT Teacher
Website: https://www.educacionit.com/
My contribution:
- Teach students HTML5, CSS and Javascript .
- Update all necessary material.

2019

Company: Focus
Project: Soy Focus / Chilean Business.
Role: web developer / freelance
Website: https://soyfocus.com/
Technology: Angular
My contribution:
- Create website layout/user interface by using standard HTML/CSS practices
- Integrate data from various back-end services and databases.

2018

Company: Feedback
Role: web developer / freelance
Website: http://www.feedback.vision/
Technology: Angular
My contribution:
Create website layout/user interface by using standard HTML/CSS practices.

2018

Company: Contextus
Role: web developer / freelance
Project:
- First phase: give styles to online stores with Bootstrap and Less.
- Second phase: build UX templates for the new eCommerce platform.
- Third phase: provide technical support to the customers in using the new and improved platform.

Website: https://www.contextuslatam.com/
Technology: eCommerce Platform
My contribution:
I handled multiple tasks and projects. When I joined the company, it offered customers an old eCommerce platform and my duties were to give own styles to a website according to the user's experience with Bootstrap, Less

and PHP; and create and modify MySQL Database Tables according to the products, categories and general information. Then, the development of a new website began and my main assignment was to build several templates that customers would be able to choose in the future in order to customize their online stores. Once the platform was built, I tested and provided technical support in opening and using the new platform version.

2017-2018

Company: Darwoft
Project: Hometowndemolition
Website : https://www.hometowndemolitioncontractors.com/
Technology: Drupal
My contribution:

I was part of a three-programmers team and my main role as a front-end included creating a new website from PSD mockups by using Bootstrap and Sass to improve visitor experience and increase product sales. This project also required interactive pages therefore writing jQuery codes was another duty assigned to me. I faced two main challenges: give the site styles without changing any HTML tag and a Multi-step Modal with a bar progress and several inputs.

2016-2017

Company: freelance
Project: Kobbe
Website: http://kobbe.com.ar/
Technology: web page layout
My contribution: :

 I worked on this particular project with a Web Designer for a month and the main goal set was to convert Photoshop layouts to web pages using HTML, CSS, and JQuery.
The client was a refrigeration equipment company which wanted to attract more customers and let them learn more about the company, as well as research product information.

Company: freelance
Project: La Japonesita
Website: http://www.lajaponesita.com/
Technology: web page layout
My contribution:

I designed and developed the interface of this project with Bootstrap. The client was a flower shop company which sold its products not only at the business location but also on line. The main challenge I faced was to set up an online payment service that allows users to buy the products with a card.

Education

<u>*Formal*</u>

2005 - 2007
